

Problem

Food waste makes up nearly 30% of our trash. When sent to landfills, it creates methane — a greenhouse gas 25x stronger than CO₂. Globally, food waste is the cause of approximately 10% of all emissions. Composting turns that waste into healthy soil instead of toxic gas.

Our Solution

One of the biggest challenges with composting is that many people either don't understand how it works or feel overwhelmed about getting started. Compost Connect aims to change that by offering simple, guided lessons that make composting more accessible--empowering more people to take part in helping the environment.

How it works

Compost Connect offers a wide selection of online learning modules on composting types and best practices. The app will get users connected with the tools and resources they need to compost correctly through these multi-step modules equipped with:

- **Educational Videos**
- **How-to Tutorials**
- **Post lesson quizzes**

Every lesson and module awards points and badges to show users' composting mastery.
